

JU Query Project README

Steps to execute the project:

1. Extract the **zip file**
2. Install **Node JS** from the official website: <https://nodejs.org/en/>
3. Now, **install the dependencies** for the project using the following steps:
 - Open the command-line interface (**CLI**)
 - Go to the project folder using the “**cd _project_path_**” command in CLI
 - Now type the command “**npm install**” to use the NPM (Node Package Manager) in CLI
4. Now, use the following steps to run the project on the local host server:
 - Now type the command “**npm start**” to run the project in CLI
 - Use “**Ctrl+C**” in CLI to stop the local server
5. Use the **firebase deployed link** to access the JU Query project globally:
<https://ju-query-beta.web.app/>
